

Dear Hiring Manager,

I hope this letter finds you well. With enthusiasm, I am applying for the Software Engineer II position. My three years of experience as a Software Engineer, coupled with my expertise in various technologies such as Jenkins, Jira, PostgreSQL, MySQL, Github, Docker, and AWS (Lambda, RDS, DynamoDB, S3, Timestream, API Gateway, AWS CDK), align with the qualifications you seek for this role.

My background includes building internal tooling, monitoring, and direct customer-facing products. With an emphasis on practicality, I continually excel in transforming ambiguous requirements into tangible, robust real-world products. Given this experience, I am confident that I can amplify the capabilities of your product, the eduCLIMBER API.

In my previous roles, I have had the privilege of working closely with product owners and other key stakeholders, similar to the collaborative environment described for your Software Engineer II role. I have also navigated the challenges of being part of an on-call rotation, providing functional assistance to customers and contributing to the smooth running of operations.

I eagerly anticipate the chance to apply my broad technological toolset to ensure the eduCLIMBER API is an optimal educational resource. The opportunity to support the provision of high-quality, impactful ed-tech solutions is particularly appealing to me, as it aligns with my personal value of using technology to make significant contributions to society.

Thank you for considering my application. I am excited about the prospect of bringing my unique skillset to your company and am keen to further elaborate on how I can contribute to your team's objectives.

Sincerely,

Curt Spiegelhalter
